DETAILED ACTION

1. Objection to Drawing has been withdrawn.

Response to Arguments

2. Applicant's arguments with respect to claims 1-20 and 22-24 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claim 22 is rejected under 35 U.S.C. 102(e) as being anticipated by Li (US 6,850,577 B2).

Regarding claim 22, Li discloses a method for adaptively adjusting parameters of a timing loop, the method comprising the steps of:

measuring a frequency error of a clock signal of a receiver (697 in Fig. 32);

determining a value indicative of an average of the frequency error over time

(Fig. 33; Col 69, L42-50); and

adaptively adjusting, based on the value, parameters of a timing loop of the receiver (as shown in Fig. 32; Col 69, L50-56).

Allowable Subject Matter

5. Claims 23 and 24 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. Claims 1-20 are allowed.

7. The following is an examiner's statement of reasons for allowance:

None of the prior teaches or suggests a method for adapting a timing loop having timing loop parameters to an environment having a broad range of frequency errors, the method comprising the steps of: setting the timing loop parameters of the timing loop to initial values; waiting a predetermined interval of time; measuring a frequency error between a receiver's clock signal and a received data signal; determining an average value of the frequency error; subtracting the average value of the frequency error from the frequency error to produce a difference value; and resetting the timing loop parameters to new timing loop parameter values if the difference value is less than a threshold value.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
